

TWINNY PLUS

Three-wheel tandem

The Twinny-Plus is a three-wheel tandem. It is easy to get on and off the Twinny-Plus tandem. This is owed to the spacious low step through. It is designed with more space between the saddle of the front rider and the handle of the co-rider, thus avoiding the two riders sitting too close to each other. You can decide on your own how to cycle together, so you may pedal independently of each other using the double freewheel.

You can use the optional switchable freewheel to determine whether and how the passenger pedals. Many options are available for this cycle, including a detachable variant. You may even opt for a steering handle to be assembled at the rear. As every bike is produced uniquely, you can get the frame height adjusted in front and at the back as per your requirement.

An electric engine can be used for a comfortable power assist to make cycling on this tandem much easier.

SUITABLE FOR:

Two adults of which one person can't participate independently in traffic.

TECHNICAL SPECIFICATIONS

Inside leg length	77 - 89 cm
Frame height	52 cm (adjustable)
Step through height	F 38 cm, R 45 cm
Cycle weight	+/- 44 kg
Cycle length	261 cm
Cycle width	75 cm

Detachable frame

Double transfer kickstand

Switchable freewheel
